Operating System

LAB 3

Part 1

Implement basic DOS commands:

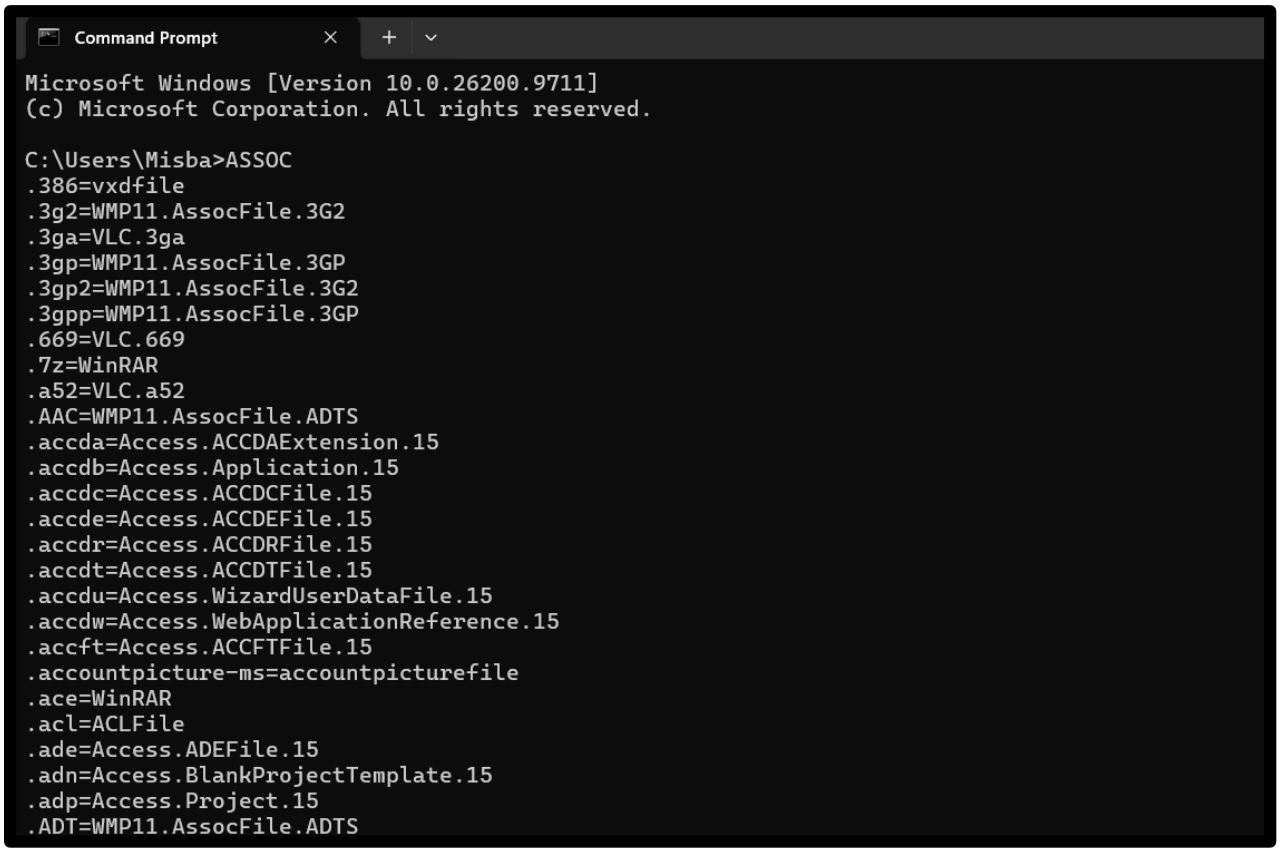

- Click the windows start button
- Type CMD in the search bar
- Open Command prompt
- A black window will appear.

Run these DOS commands:

Type each command and press Enter.

ASSOC: Displays file extensions and their associated file types.

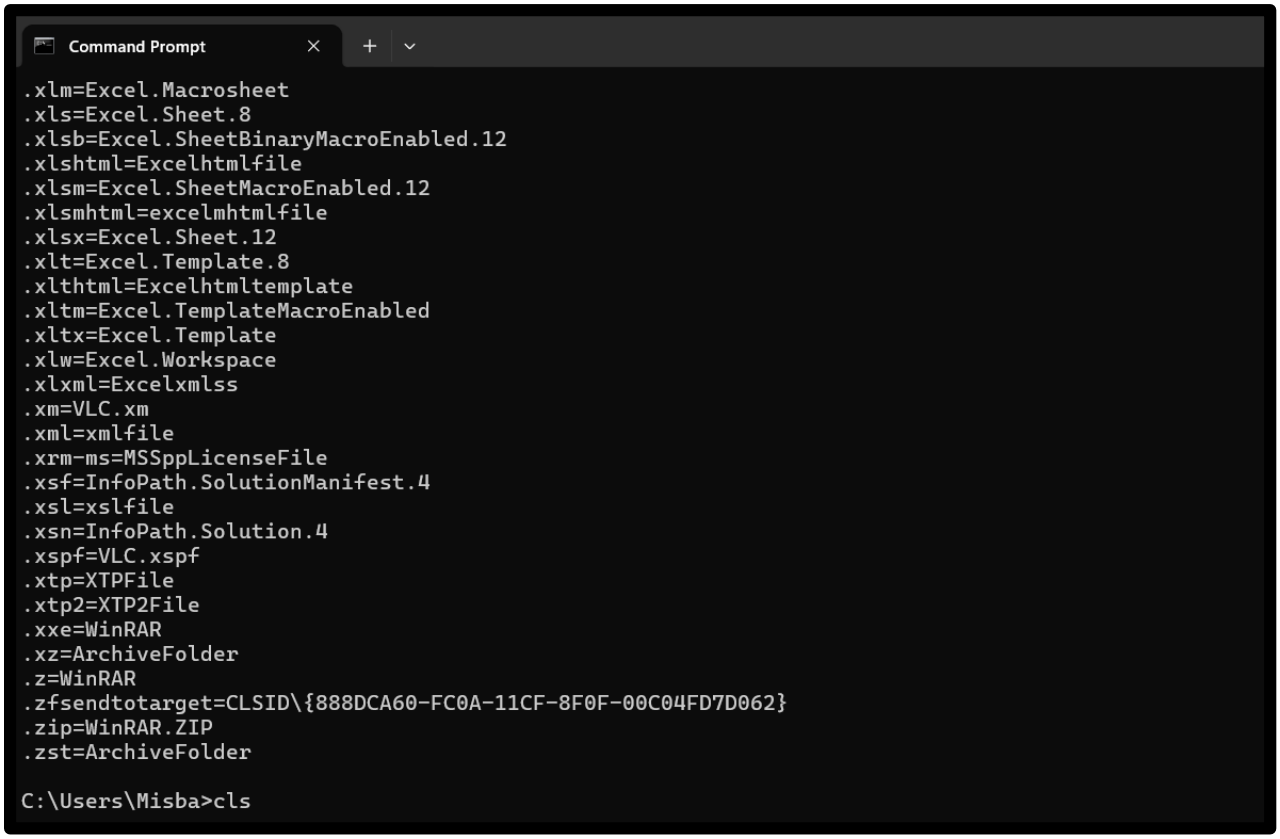

CD: Changes the current directory.

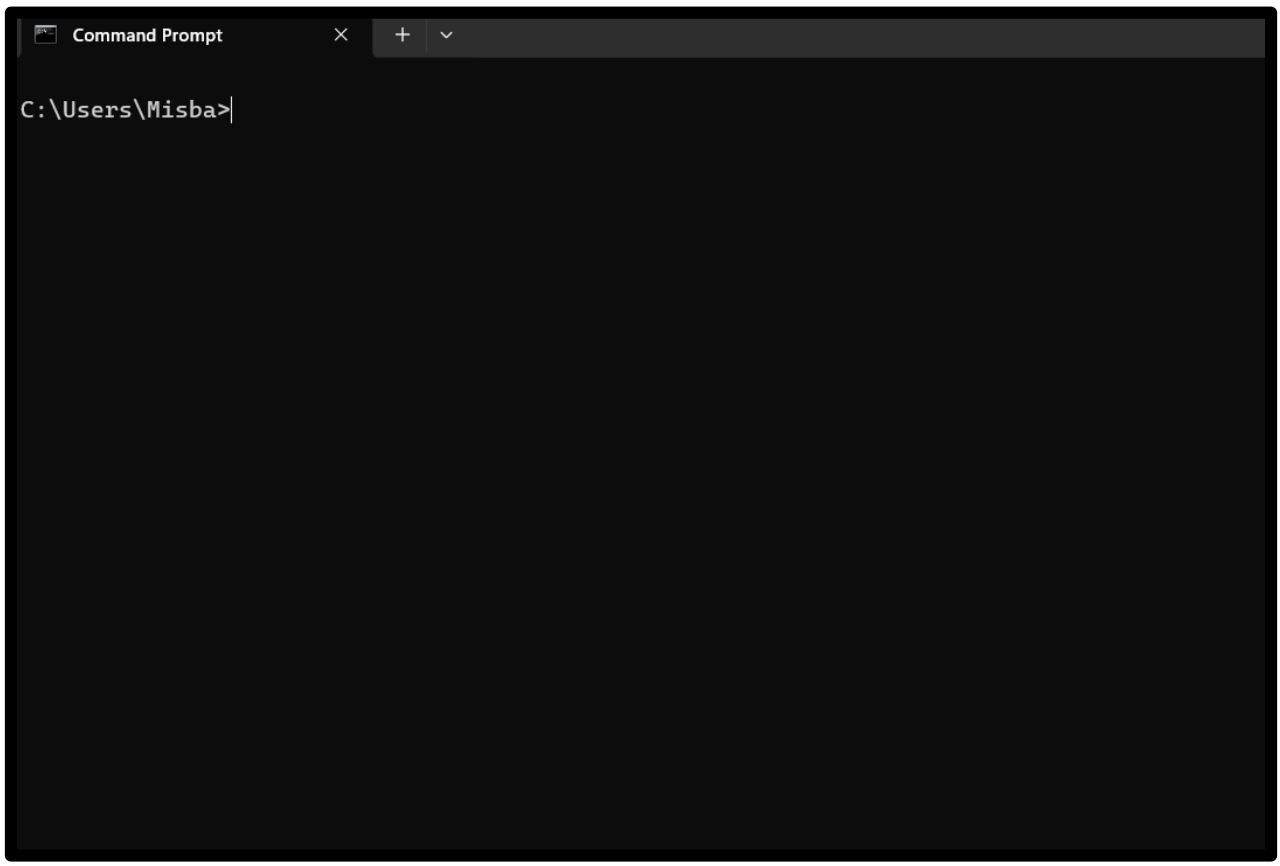

WHOAMI: Shows the current user name.

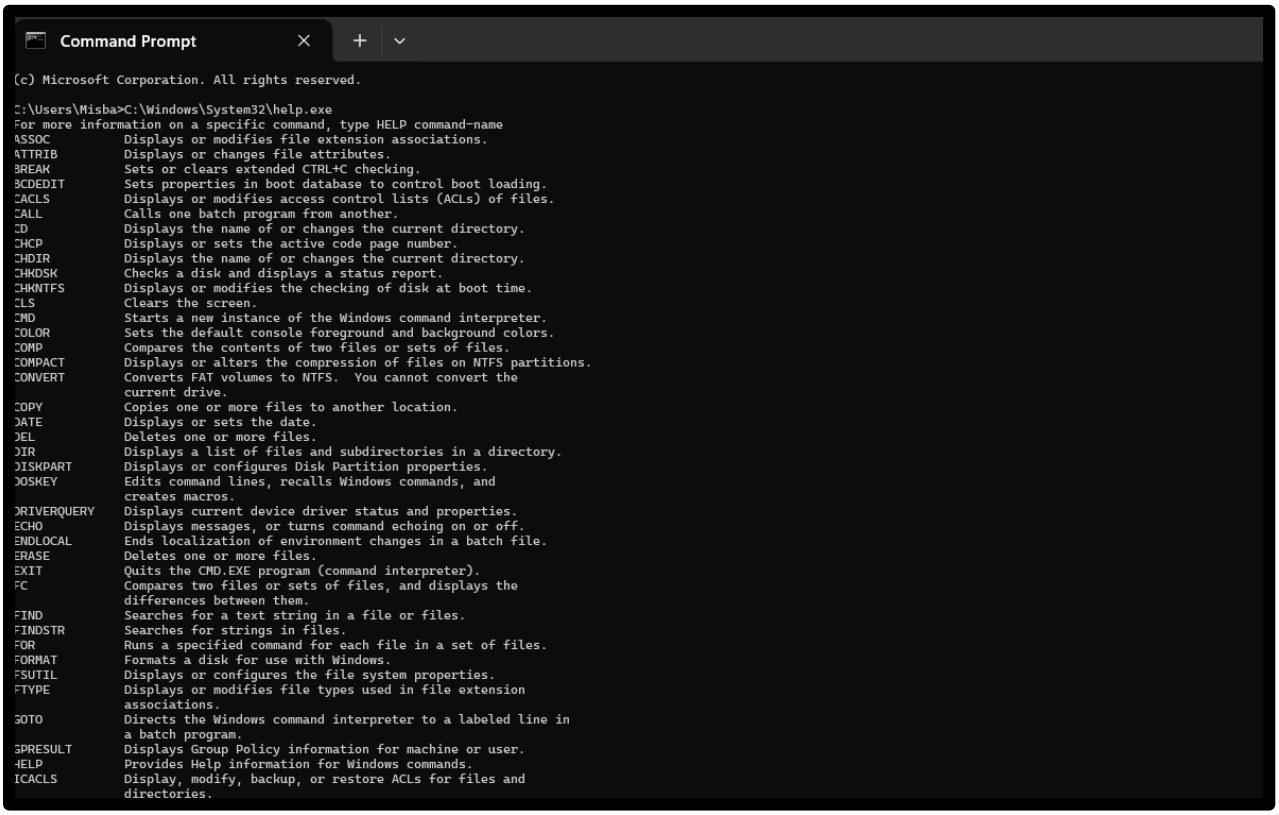

CLS: Clears the screen.

HELP: Displays help for commands.

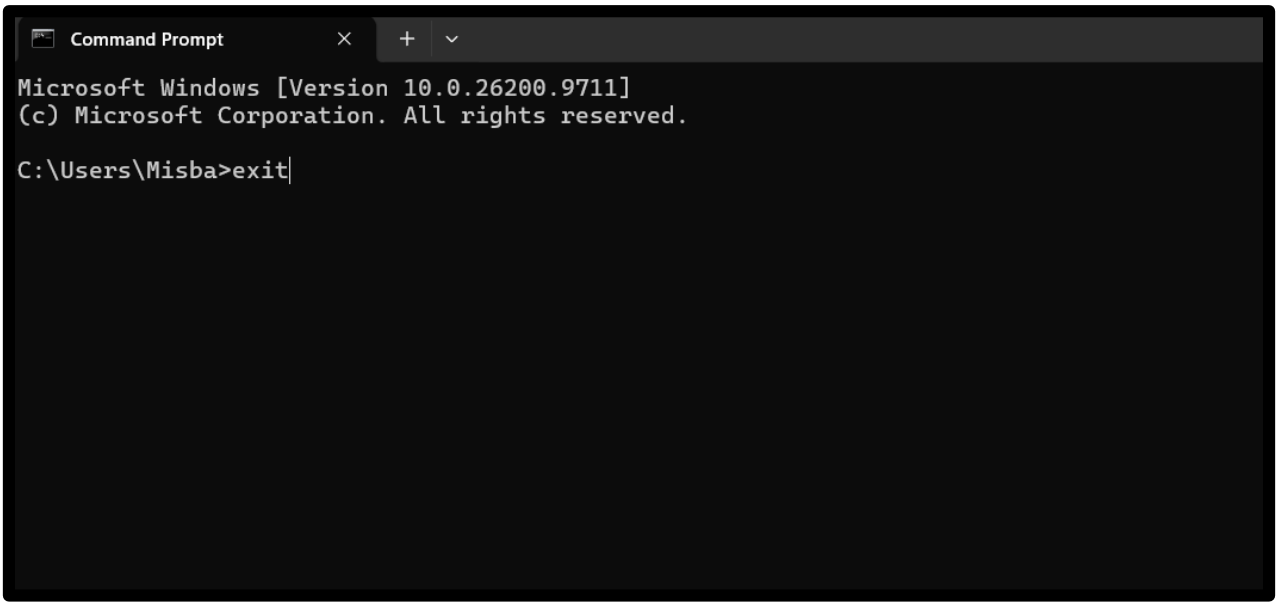

DATE: Displays or changes the system date.

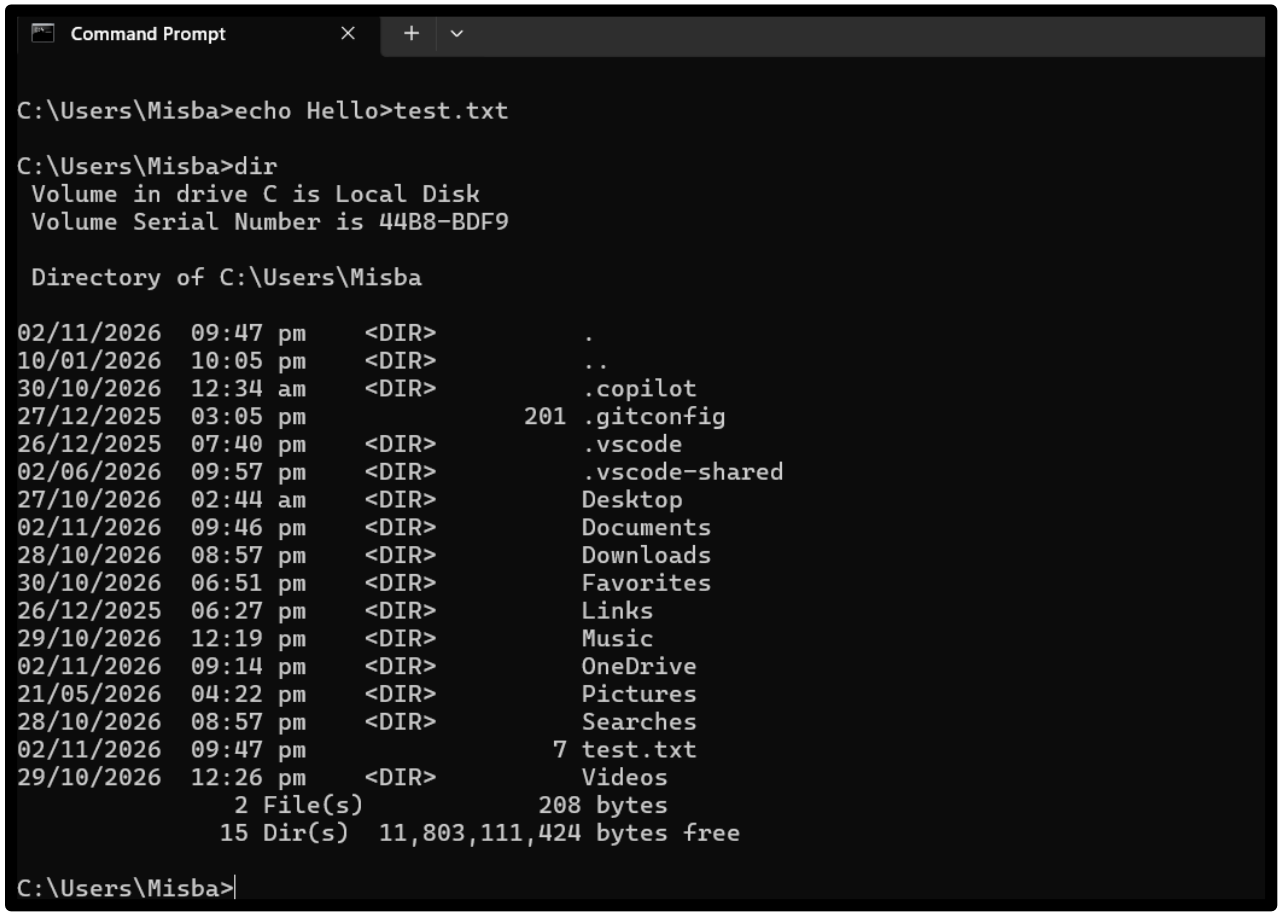

ECHO: Displays text on the screen.

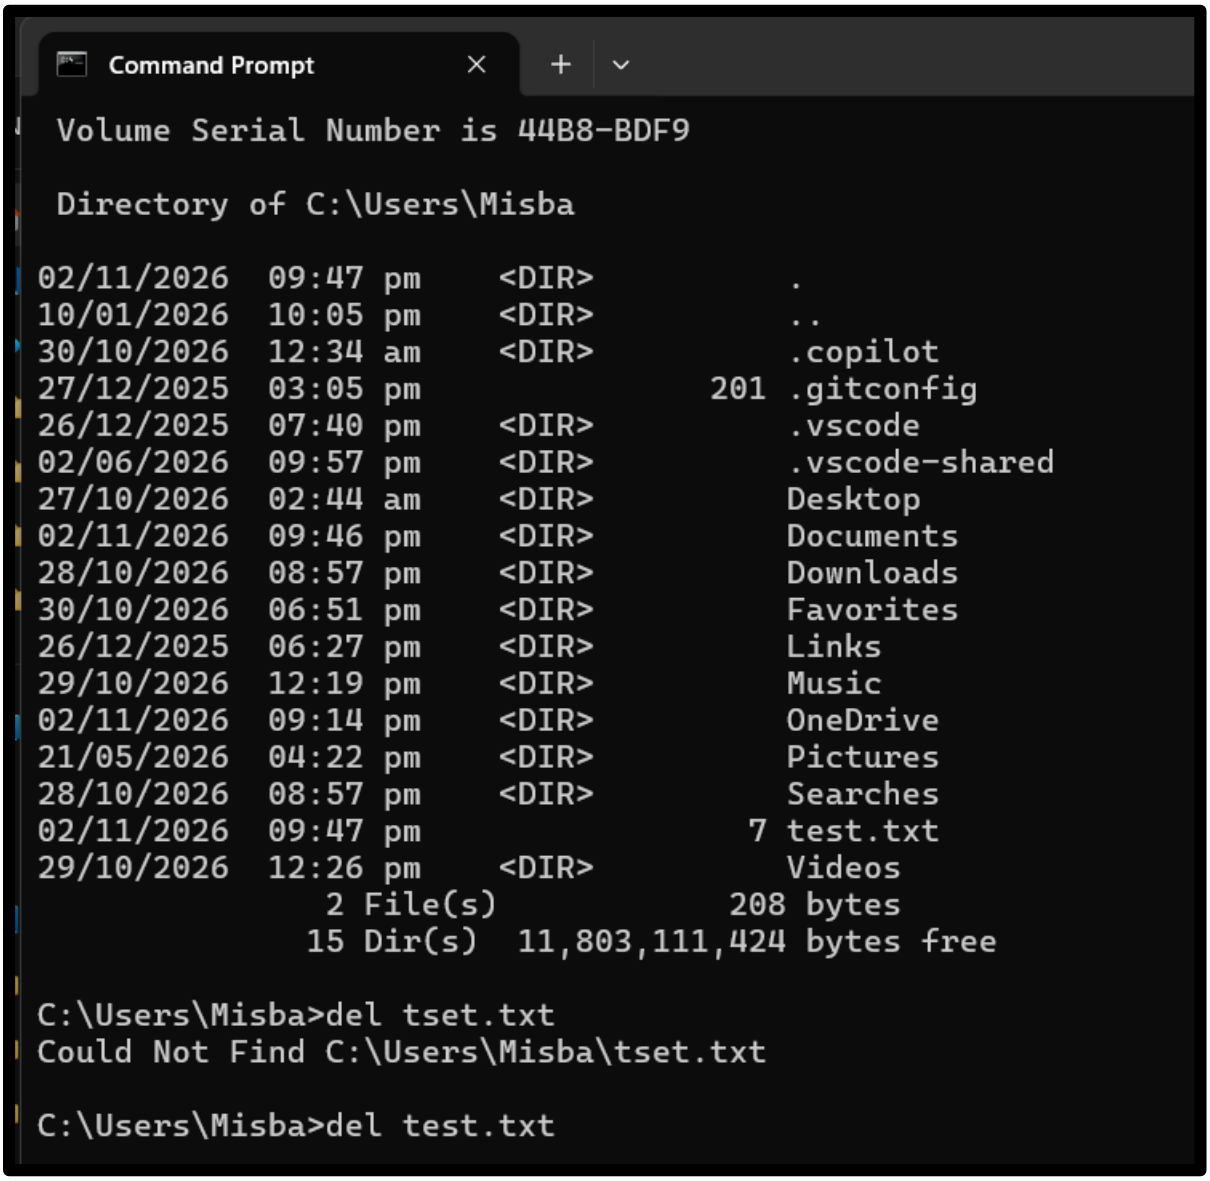

EXIT: Closes command prompt.

DEL: Deletes a file.

Part 2

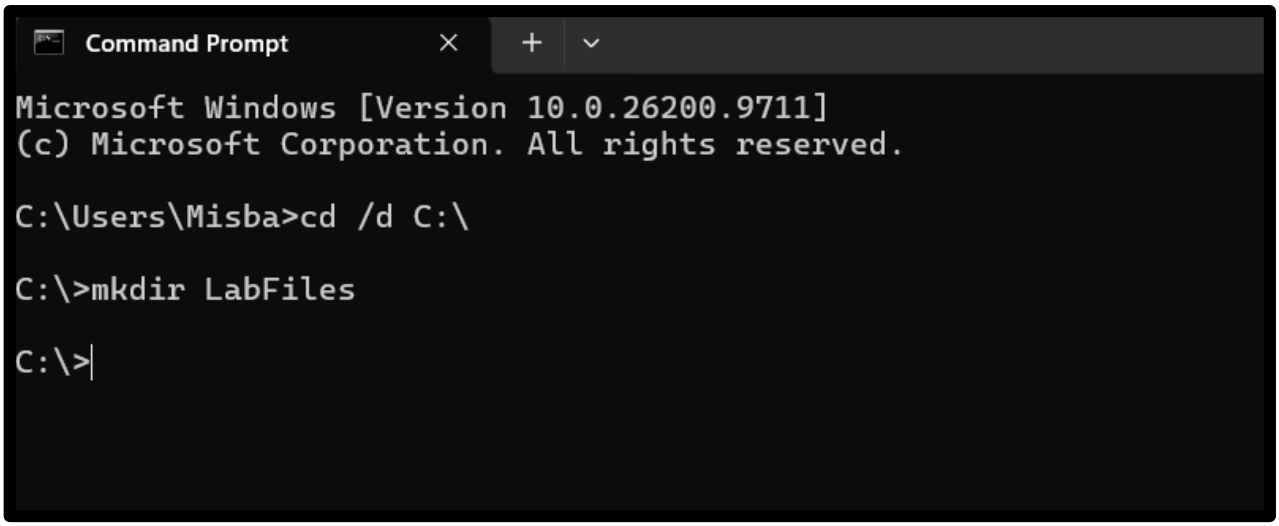

DOS Commands for file and directory management:

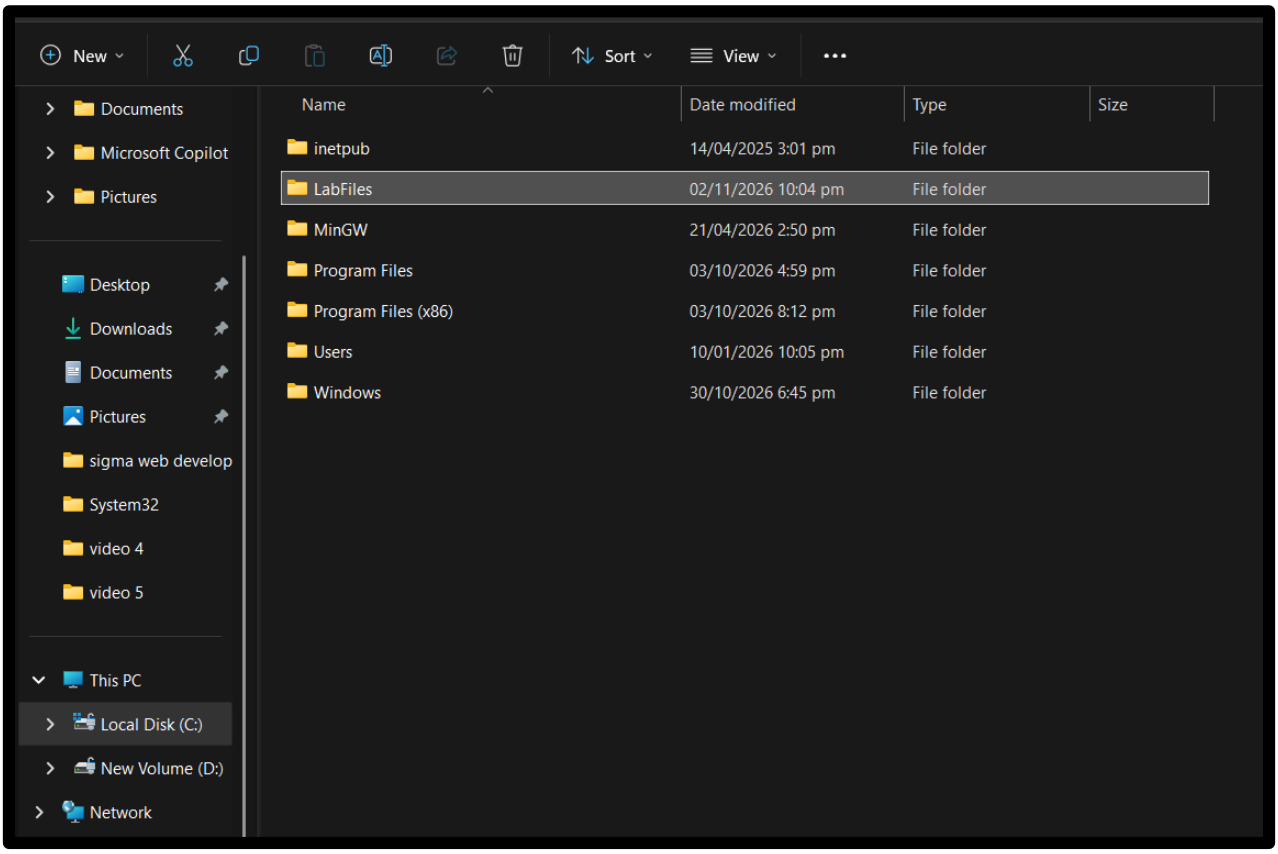

Step 1: Create a new directory named LabFiles on C:drive

- In CMD, type: **Cd /d C:**
- Press enter

- Now type mkdir LabFiles
- Press enter

  Your folder named **LabFiles** has been created on the C: drive .

<u>Step 2:</u> Navigate to LabFiles directory:

- Type cd LabFiles.
- Press enter.
- It shows

This means you have successfully entered the folder.

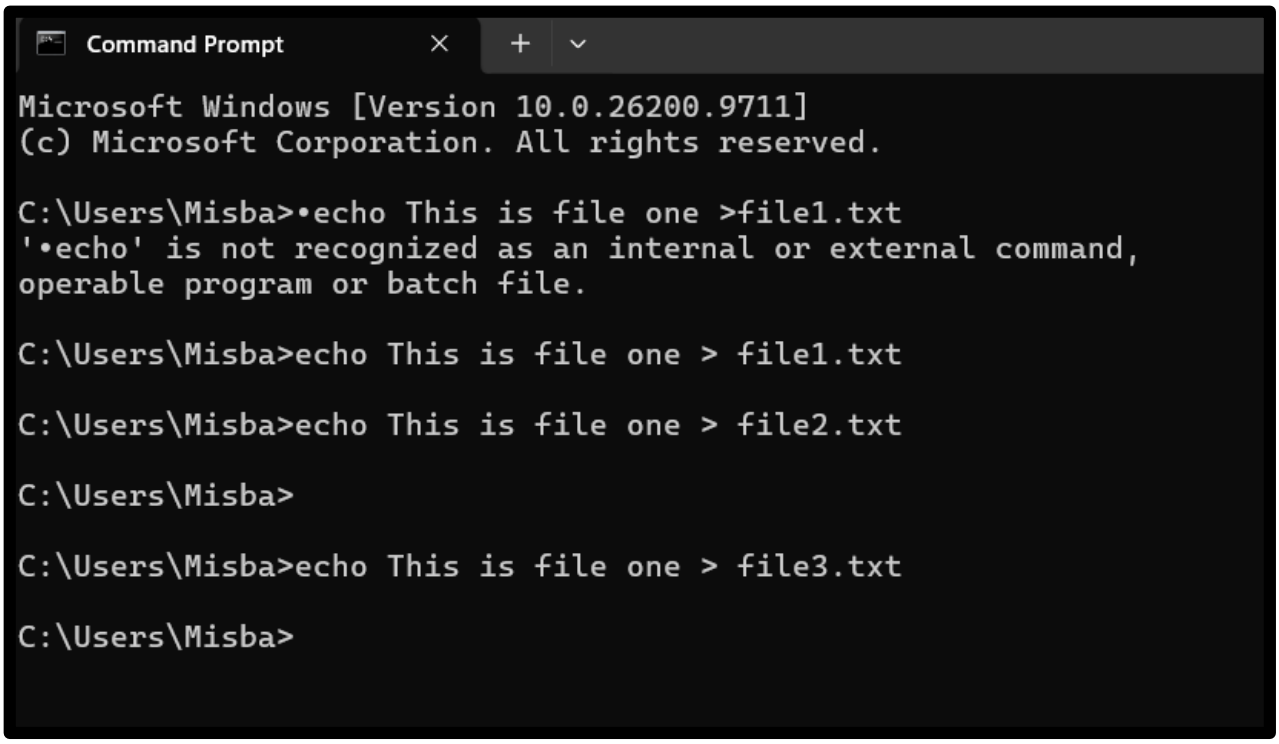

<u>Step 3:</u> Create three text files:

- File1.txt
- File2.txt
- File3.txt

Type these commands one by one.

- echo This is file one > file1.txt
- echo This is file one > file2.txt
- echo This is file one > file3.txt

Press enter after each command.

All three files should now be created inside LabFiles folder.

Step 4: Verify the files using DIR command:

- Now type, **dir**
- Press enter.
